This is the first undergraduate textbook to fully integrate results from geophysics, geochemistry, and petrology to describe the structure, composition, and dynamic processes that operate throughout the solid Earth. Our Earth is a dynamic planet, as clearly illustrated on the main map by its topography, over 1, volcanoes, 44, earthquakes, and impact craters. These features largely reflect the movements of Earths major tectonic plates and many smaller plates or fragments of plates (including microplates). An illustrated introduction to the dynamic workings of the Earth furnishes a guided tour of the planet's more than four-billion-year history, revealing how Earth evolved from space dust into a life-sustaining world of oceans, weather, thermal energy, and mobile land masses.
