It is the precise way we may understand the construction and appearance of the subject. Space is multidimensional in terms of both meaning and logic. Lacanian topology answers questions of post-structuralism while revealing the flaws in 3/5(1). It thus announces an entirely new differential clinic, and one which remains to be constructed: a clinic of supplementation indexed on the Borromean knot (Lacan: Topologically-Speaking, p). This is perhaps what Lacans legacy means in psychoanalysis today.

Jacques Lacan devoted the last part of his teaching to the topology of the subject. During the 50s, he gauged the topology of surfaces (torus, Moebius strips, Klein bottles, crosscaps) and from on, he studied the topology of knots (Borromean, the sinthome)/5(1). yet another book on Lacan that stops well short of what it claims to deliver. This haphazard collection of essays continues to promote authors who pay homage to Lacan's 'style' of language. It doesn't work in English, for cultural and practical reasons. You can't work from neologism and jargon, and explain using metaphors.
