Network and web site vulnerability scanning is the most efficient security investment of all. If one had to walk just one of these roads, diligent wall building or vulnerability testing, it has been seen that web scanning will actually produce a higher level of web security on a dollar for dollar basis. Network security combines multiple layers of defenses at the edge and in the network. Each network security layer implements policies and controls. Authorized users gain access to network resources, but malicious actors are blocked from carrying out exploits and threats. In this article, we'll explore the different types of IT security and what technologies and methods are used to secure each so you can arm your network with the people and plans you need to have excellent lines of defense in place and keep attacks at bay.
